EDUCATION

M.S., Robotics and Autonomous Systems Graduating May 2026
Arizona State University, Tempe, AZ 4.0 GPA
Ira Fulton School of Engineering
Relevant coursework: Robot Modeling & Control, Multi-Robot Systems, Perception, Reinforcement Learning

TECHNICAL SKILLS

Simulation & Frameworks: GazeboSim, MuJoCo, MuJoCo-Warp, ROS, NVIDIA Warp, PyTorch
Programming: Python, MATLAB, C++, Bash, Arduino
Hardware: LEAP Hand, Wonik Allegro Hand, Franka Emika Panda
Design/Manufacturing: SolidWorks, Fusion360, Cura, 3D Printing

PUBLICATIONS

ComFree-Sim: A GPU-Parallelized Analytical Contact Physics Engine for Contact-Rich Robotics Simulation
Chetan Borse, Zhixian Xie, Wei-Cheng Huang, Wanxin Jin
Submitted to Intelligent Robots and Systems (IROS) 2026, under review [Website] [Paper]

RESEARCH

IRIS Lab, Tempe, AZ: Master's Thesis Student August 2025 – Present
- Developed sampling-based MPC (MPPI) for dexterous manipulation in contact-rich environments.
- Leveraged GPU-parallelized simulation (ComFree-Sim, NVIDIA Warp) for efficient trajectory optimization and policy evaluation.
- Deployed control policies on LEAP Hand hardware, achieving stable real-time manipulation at ∼20 Hz.

PROJECTS

Sampling-Based MPC for Manipulation using ComFree-Sim [Website] December 2025 - February 2026
- Built a sampling-based MPC pipeline using a GPU-parallelized contact physics engine for multi-fingered dexterous manipulation and bimanual manipulation.
- Leveraged parallel simulation for faster trajectory optimization in contact-rich environments.
- Deployed and validated efficient and scalable control for dexterous manipulation tasks on LEAP Hand Hardware.

Generalizing Object Manipulation using Goal-Conditioned RL [Code] October 2025 - December 2025
- Reproduced key results from ECRL using Transformer-based actor-critic policies with entity-centric representations.
- Trained models using Deep Latent Particles for improved compositional generalization.
- Achieved strong generalization performance across manipulation tasks.

Enhancing Visuomotor Diffusion Policy with AdaLN-Zero [Code] March 2025 - May 2025
- Improved training stability of diffusion policy networks by integrating AdaLN-Zero into Transformer architectures.
- Addressed instability and high computational cost in long-horizon visuomotor tasks.

Debris Detection using Swarm Robots [Code] October 2024 - December 2024
- Designed decentralized MATLAB-based mapping algorithm for multi-agent debris localization for surface vessels.
- Implemented distributed map-sharing to merge local maps into a unified global debris field map.

EXPERIENCE

Lycan Aerospace, Bangalore, India: Design Engineer April 2023 – May 2024
- Designed and prototyped structural and payload systems for a 10L-capacity agricultural UAV (AGROS), producing manufacturing drawings and collaborating cross-functionally to ensure manufacturability and system integration.

Tata Consultancy Services, Mumbai, India: Systems Engineer October 2021 – May 2022
- Supported migration from legacy mainframe systems to an AWS-based distributed Java environment, monitoring batch processes and resolving data discrepancies in production pipelines.
